

CLOUD VOICE FOR MICROSOFT TEAMS

A High Demand Service to Build Your
Business and Delight Your Customers

MICROSOFT TEAMS SHOWS EXCEPTIONAL GROWTH

The COVID-19 pandemic sent businesses of all sizes scrambling to find ways to keep their operations running in a remote or hybrid work environment. However, those same businesses are now using this digital technology to change the way they operate. They're seeing the benefits of collaborating using Microsoft Teams.

In October 2020, Microsoft announced that there were 115 million daily active users¹ for their Microsoft Teams application.

Your customers are looking for unified communications as a service (UCaaS) to take full advantage of this new digital technology, and they're looking to you to provide it.

CLOUD VOICE FOR MICROSOFT TEAMS SIMPLIFIES COMMUNICATION

Businesses are already using Microsoft Teams for internal instant messaging, video conferencing, and sharing documents. The next logical step is to integrate Microsoft Teams into a UCaaS solution to take advantage of cheaper call rates, more flexibility, better security, and more technical support.

Your customers can use Cloud Voice for Microsoft Teams as a PBX to let their users place, receive, and transfer calls to and from landlines and mobile phones from within the Teams application.

You can be the hero that brings them this capability.

THE ORIGINS OF CLOUD VOICE FOR MICROSOFT TEAMS

From its introduction in 2017, Microsoft has been working to round out Teams' communication capabilities with access to voice solutions.² First, they integrated a phone system into Teams.

Next, the company created Microsoft Calling Plans to deliver calls to and from Teams to the public switched telephone network (PSTN). However, there are some disadvantages to using Microsoft's plans in terms of features, cost, and support.

The Cloud Voice approach allows your customers to connect to the PSTN using their preferred third-party telephony provider. In most situations, businesses using Cloud Voice will have lower rates and better support.

HOW BUSINESSES USE CLOUD VOICE FOR MICROSOFT TEAMS

Businesses use Cloud Voice to access the PSTN using two key elements.

1. **Session Border Controller (SBC)**

An SBC is used to protect the connections between networks, and it is a preferred method since it is more secure, scalable, and efficient.

- ✓ A security firewall that encrypts traffic
- ✓ Simple and flexible paced-migration
- ✓ Resiliency to manage and avoid disruptions
- ✓ Increased performance by shifting loads from the mediation role

2. **SIP Trunks**

SIP Trunks connect the phone system to the internet and the PSTN – usually via a premises-based appliance – allowing users to make local, long distance, and international calls.

HOW BUSINESSES USE CLOUD VOICE FOR MICROSOFT TEAMS, CONTINUED

Businesses use Cloud Voice for Microsoft Teams because they can have one interface for everything. No on-premise equipment is required, and complete PBX feature options are available. Your customers can complete a phased migration from their PBX to MS Teams Calling, either porting existing numbers or creating new ones.

Customers who need advanced features, customizations, and integration can add them to back office or front office API-enabled applications. In addition, overlays are available to avoid reconfiguring the network design for:

- ✓ Call recording
- ✓ Microsoft Dynamics 365 or Salesforce integration
- ✓ IVR services with AI
- ✓ Call or contact center services

HOW CLOUD VOICE FOR MICROSOFT TEAMS HELPS YOUR CUSTOMERS

Digital transformation efforts often overlook telephony, and the business continues to use fragmented communication systems. Direct Route for Microsoft Teams gives you the ability to take your customers to a truly integrated communication environment. Here are just some of the benefits you can offer your customers.

- ✓ True unified communications. Inherent calling capabilities within the same collaboration tool and client – embedded as just another feature.
- ✓ Simplified vendor relationships. Multiple local carriers can be replaced with a single provider.

BENEFITS OF CLOUD VOICE FOR MICROSOFT TEAMS

- ✓ **Maximizing on investment.** Maximize your existing O365 Teams investment by utilizing the built-in phone system capability and just adding Cloud Voice for external calling.
- ✓ **Flexibility.** A business doesn't need to manage their own PBX equipment, and it's easy to scale the telephone system.
- ✓ **Dependability.** Cloud-based systems offer maximum reliability.
- ✓ **Saves money.** Moving to the cloud means a business can free up employees to address higher-value projects, and there's no capital expense required to get the latest technology.

HOW YOU CAN ADD CLOUD VOICE FOR MICROSOFT TEAMS TO YOUR UCAAS OFFERINGS

When you partner with UniVoIP, your integration is easy with:
